For a stepper motor, the 4 terminal pins on the H-Bridge should connect to the 4 leads of the motor. The 4 logic pins will then connect to the Arduino (8, 9, 10, and 11 in this tutorial). As shown in the Fritzing diagram, an external power source can be

connected to power the motors.

Controlling a Stepper Motor With an Arduino : 8 Steps ...

All of our stepper motor controllers that directly drive motors support microstepping, and some of our products can generate step requests at up to 500,000

Bookmark File PDF 4 Axis Step Motor Controller Smc Etech

microsteps/second (step rates are board model and firmware dependent: Currently, the six axis BC6D20, BC6D25 and SD6DX controllers are by far our "fastest" products).

The project is converting a mill into a 5 axis cnc and controlling all 5 steppers using arduino. I did some research online and watched a few tutorials and I believe I understand how to control 3 steppers using grbl. A friend is sending me an arduino uno with a CNC shield (not grbl but grbl compatible) and 4 stepper controllers.
