An alphabetical index (referred to as an index) is a list of keywords or phrases used throughout a document that, if listed in order, may help the reader find information quickly. Generally an index is found in the back of book or document and lists several keywords or phrases in alphabetical order with page numbers.

Hi . I had an issue with index match but the problem was not listed here. I used a cell reference as my lookup value, it worked in all other cases but for some reason, when I used the actual value, the formula worked.. but when I used a reference cell in the formula (which had the exact same value) it did not work.

The Dynamic INDEX. The syntax is INDEX(array, row_num, [column_num]) where array refers to the Table name, the row_num reference is set to zero (0), and the column_num is a number of the Table column you want to reference. Using zero (0) for the row_num argument forces all rows in the column to be returned. Create a Defined Name Formula with INDEX
