The Respiratory system takes in oxygen via the lungs and excretes excess carbon dioxide. Oxygen travels from lungs into the blood and carbon dioxide travels from the blood into the lungs. The blood circulates oxygen to all tissues and transports waste carbon dioxide to the lungs. ... Anatomy and Physiology Unit 1 Review Sheet Last modified by ...

Anatomy and Physiology Unit 1 Review Sheet

The respiratory system is responsible for delivering oxygen to the tissues and removing carbon dioxide from the tissues. The lungs are also involved in protecting the body from infection and are involved in thermoregulation. The alveoli are the functional unit of the lung where gas exchange takes place.

Anatomy and Physiology - The Respiratory System

_____ is the transport of respiratory gases between the lung and tissue cells of the body accomplished by cardiovascular system using blood as the transport vehicle.

Respiratory System Anatomy Review Flashcards | Quizlet

The major respiratory structures span the nasal cavity to the diaphragm. Functionally, the respiratory system can be divided into a conducting zone and a respiratory zone. The conducting zone of the respiratory system includes the organs and structures not directly involved in gas exchange. The gas exchange occurs in the respiratory zone.
