Antenna design and RF layout are critical in a wireless system that transmits and receives electromagnetic radiation in free space. The wireless range that an end-customer gets out of an RF product with a current-limited power source such as a coin-cell battery depends greatly on the antenna design, the enclosure, and a good PCB layout.

If your design doesn't have as much space, you might need to choose a smaller chip antenna or even a custom design. The bent monopole antenna on the Nordic board has an omnidirectional antenna pattern, whereas a design that requires a directional antenna might place the antenna directly over a ground plane.
