Application Of Lattice Boltzmann Method

The lattice Boltzmann method with single-relaxation-time (LBM-SRT) and multi-relaxation-time (LBM-MRT) models is able to reproduce the simulation of lid-driven square cavity flows by conventional methods and is a convenient way of computing flows governed by the incompressible Navier-Stokes equations.

Application of lattice Boltzmann method for incompressible ...

Microflow has become a popular field of interest due to the advent of microelectromechanical systems. In this work, the lattice Boltzmann method, a particle-based approach, is applied to simulate the two-dimensional isothermal pressure driven microchannel flow. Two boundary treatment schemes are incorporated to investigate their impacts to the entire flow field.

Application of lattice Boltzmann method to simulate ...

Lattice Boltzmann methods (LBM), originated from the lattice gas automata (LGA) method (Hardy-Pomeau-Pazzis and Frisch-Hasslacher-Pomeau models), is a class of computational fluid dynamics (CFD) methods for fluid simulation. Instead of solving the Navier-Stokes equations directly, a fluid density on a lattice is simulated with streaming and collision (relaxation) processes.

The method is first briefly presented, to point out its strengths and weaknesses. Lattice-Boltzmann method is then applied to three different applications: a DNS of a single blade rotor, a large eddy simulation of a rotor operating in-ground effect and a large eddy simulation of a rotor optimised for acoustic performance.
