### **CHAPTER 14 THE HUMAN GENOME**

Chapter 14 The Human Genome In order to learn more about humans, biologists often use a karyotype to analyze human chromosomes. A karyotype is a picture of a cell's chromosomes grouped in homologous pairs. Humans have 46 chromosomes. Two of these, X and Y, are sex chromosomes. Females have two X chromosomes (XX). Males have one X and one Y chromosome (XY).

development. Sex chromosomes are made in a process called meiosis whereas autosomes are produced in mitosis.

### **Chapter 14-The Human Genome Flashcards | Quizlet**

Chapter 14 - The Human Genome The Human Genome Project (HGP) formally began in 1990 and was finished in 2003. The goal was to discover the DNA sequences for all of the 20,000-22,000 genes that are found in human beings. This knowledge is vital for research into genetic disorders and possible genetic solutions to these disorders.
