therapy.

CHAPTER 61 Neonatal Intestinal Obstruction

Objective: Intestinal obstruction is a blockage of the intestinal content through bowel. The block must be complete and permanent. Obstruction may be mechanical, simple or strangulated, and paralytic. The purpose of this chapter is to clarify, also evaluating our surgical experience, the steps to diagnose and the ways to treat intestinal obstructions.

The presence of associated anomalies is unusual and depends on the underlying cause of meconium peritonitis. Up to 15% to 40% of neonates with meconium peritonitis have cystic fibrosis (Park and Grand, 1981; Payne and Nielsen, 1983). However, in prenatally diagnosed meconium peritonitis, cystic fibrosis is reported to be the cause in only 8% to 13.5% of cases (Foster et al., 1987; Dirkes et al ...
