Abstract. If $(X ?)$ is any family of spaces, then $?X ? ?X ?)$ is a compactification of $X ?$. In Example 1.67 we observed that in the case of $? x ?$, $? ? x ? ?$ is not the Stone-?ech compactification of $? x ?$. The present chapter will be largely devoted to determining when it will be true that $(?X ?)$, is $? X ?)$, i. e. when $X ?$ will be C^* -embedded in $(?X ?)$.

Stochastic processes are collections of interdependent random variables. This course is an advanced treatment of such random functions, with twin emphases on extending the limit theorems of probability from independent to dependent variables, and on generalizing dynamical systems from deterministic to random time evolution.
