In an electromagnet the magnetic field is created through electric current in a wire-wound coil and strengthened by a soft-iron core. A permanent magnet is made of ferromagnetic material, which is magnetised by a strong external magnetic field. Note: We only carry permanent magnets in our shop, no electro magnets.

You can create a permanent magnet out of an iron or steel rod in several ways, but to make a really strong magnet, use electromagnetic induction. SCIENCE Biology

How to Make Super Strong Permanent Magnets | Sciencing

The magnetic field generated by the EPM is produced by the permanent magnets not by electric currents and this is the main difference with the electromagnets. An EPM uses only a pulse of current to magnetize one of the magnet in a desired direction (turning on and off the external magnetic field of the latch).
