ential equation, or just differential equation, is another type of equation where the unknown is not a number, but a function. We call the unknown function  $x(t)$  and think of it as a function of time  $t$ . Simply, a differential equation is an equation that relates the unknown function to some of its derivatives, which, of course, are not known ...

is a second-order ordinary differential equation. In Example 1, the first and third equations in (2) are first-order ODEs, whereas in (3) the first two equations are second-order PDEs. First-order ordinary differential equations are occasionally written in differential form  $M(x,y)dx + N(x,y)dy = 0$ . For example, if we assume that
