Drug, any chemical substance that affects the functioning of living things and the organisms (such as bacteria, fungi, and viruses) that infect them.

Pharmacology, the science of drugs, deals with all aspects of drugs in medicine, including their mechanism of action, physical and chemical properties, metabolism, therapeutics, and

*Drug | chemical agent | Britannica
Drugs act on the cell membrane by physical and/or chemical interactions. This is usually through specific drug receptor sites known to be located on the membrane. A receptor is the specific chemical constituents of the cell with which a drug interacts to produce its*

Introduction to Drug Action - Series

Elmhurst College

Drug effect = biochemical and physiological changes that occur as a consequence of drug action

Structure-dependent drug action

The actions of the majority of drugs are intimately related to their three-dimensional chemical structure.

Drug Action - an overview |

ScienceDirect Topics

Pharmacodynamics is the study of the biochemical and physiologic effects of drugs and their mechanisms of action on the body or on microorganisms and other parasites within or on the body. It considers both drug

Drug - Drug - Types of drugs: Drugs used in medicine generally are divided into classes or groups on the basis of their uses, their chemical structures, or their mechanisms of action. These different classification systems can be confusing, since each drug may be included in multiple classes.

Drug - Types of drugs | Britannica On the basis of chemical structure: This is a common

pharmacokinetics. The drugs that enter the human tend to stimulate certain receptors, ion channels, act on enzymes or transporter proteins.

Drug action - Wikipedia

In pharmacology, the term mechanism of action refers to the specific biochemical interaction through which a drug substance produces its pharmacological effect. A mechanism of action usually includes mention of the specific molecular targets to which the drug binds, such as an enzyme or receptor. Receptor sites have specific affinities for drugs based on the chemical structure of the drug, as well as the specific action that occurs there. Drugs that do not bind to

Mechanism of action - Wikipedia

Mechanism of Drug Action

-Physical Mechanisms

Pharmacology 12,264 Views

When the drug does not produce any chemical reaction or change in the cells of the body and the effect is only physical, the mechanisms involved are called physical mechanisms.

Mechanism of Drug Action

-Physical Mechanisms - howMed

In chemical mechanisms, drugs act by producing chemical reactions in the body.

Mechanism of Drug Action

-Chemical Mechanisms - howMed

Similarly, many classes of drug

are cleared from the body by a liver enzyme called CYP3A4. If you take two drugs that are each metabolized by the enzyme, the drugs may not be cleared as effectively and begin to build up, leading to toxicity. By classifying a drug by its CYP3A4 action, doctors are better able to avoid this interaction.
