FAQ | Adobe HTTP Dynamic Streaming

Integrated with Multi-data-stream mode such as Multiple Description Coding (MDC), ALM becomes more scalable and robust in high-dynamic Internet environment compared with single data stream. Although MDC can provide a flexible data transmission style, the synchronization of different descriptions encoded from one video source is proved to be difficult due to different delay on diverse transmission paths.

A Robust Streaming Media System - ScienceDirect

Within a mode, the system concurrently processes many streams, each imposing a potentially dynamic workload on the scarce system resources. The dynamic sharing of scarce resources is known to jeopardize robustness and

In order to build a fast and robust gesture recognition system, in this paper, we present a novel key frames extraction method and feature fusion strategy. Considering the speed of recognition, we propose a new key frames extraction method based on image entropy and density clustering, which can greatly reduce the redundant information of original video.
