The year 2012 marked the centenary of one of the most significant discoveries of the early twentieth century, the discovery of X-ray diffraction (March 1912, by Laue, Friedrich and Knipping) and of Bragg's law (November 1912). The discovery of X-ray diffraction confirmed the wave nature of X-rays and the space-lattice hypothesis.

Early after the X-ray's invention there was a mean lag of 10 or 12 days between admission to the hospital and getting an X-ray taken. That being the case, we can infer that the diagnosis and treatment decision was made on admission, not on the basis of the X-ray image, which was taken later not to make a diagnosis or to guide therapy.
