LAQ #1. This question will assess your understanding of "chance" in evolution and challenge you to integrate information from several different lectures. Chance is considered by some to play an important role in macroevolution. Address the possible roles of chance in evolution during both (a) speciation (10 pts) and (b) extinction /

I. Short Answer Questions DO ALL OF THEM, PLEASE

a) Speciation is the process by which reproductively isolated population evolve to become distinct species. So by using this concept many new species can be identified. If two species are morphologically different then if this concept is applied it can detect the divergence and existence of two species as it considers the genetic variability. So speciation would be easy.

exam 3 evolution written questions Flashcards | Quizlet
