0826414273 - The Future of the Universe: Chance, Chaos ...

Assume that the ribozyme is 300 nucleotides long, and that at each position there could be any of four nucleotides present. The chances of that ribozyme assembling are then 4^{300} , a number so large that it could not possibly happen by chance even once in 13 billion years, the age of the universe. But life DID begin! Could we be missing something?
