Aperture controls the depth of field or the amount of the image that's sharp. These elements comprise the Exposure Triangle, which is a much more in-depth topic that we explore in depth in this guide. For our purposes here, we tackle aperture and depth of field to help you build a solid understanding of this most fundamental aspect of using light.

A Beginner's Guide to Aperture and Depth of Field

"The aperture is proportional to the square root of accepted light, and thus inversely proportional to the square root of required exposure time, such that an aperture of $f/2$ allows for exposure times one quarter that of $f/4$." Whatever. Maximum and minimum apertures. All lenses have a maximum and a minimum aperture at which they can be used.

A more typical consumer zoom will have a variable maximum relative
aperture since it is harder and more expensive to keep the maximum
relative aperture proportional to the focal length at long focal
lengths; $f/3.5$ to $f/5.6$ is an example of a common variable aperture
range in a consumer zoom lens.
