How To Fly A Plane
To fly an airplane, you need to keep the artificial horizon instrument, also known as the altitude indicator, lined up so the plane stays level. If you start to fall below the horizon, pull back gently to raise the nose of the plane.

How to Fly an Airplane (with Pictures) - wikiHow
In other words, the pilot must be ready to take over and fly the airplane safely to its destination (or until smoother air allows the pilot to reconnect the autopilot). Since the amount of manual flying is relatively low after students graduate from flight school and start working for an airline, it is vital that a strong foundation has been created during their initial training.
