Impulsivity The Behavioral And Neurological

Impulsivity explores the basis for the seemingly universal tendency to devalue rewards or punishments that are not immediately available. When confronted with any number of modern impulsive behaviors—such as drug use, pathological gambling, marital infidelity, and gluttony—individuals have a choice with two outcomes: an immediate benefit, such as getting high, or a delayed or probabilistic ...

Explore the seemingly universal tendency to devalue rewards or punishments that are not immediately available, and describe the most common procedures to study discounting in humans and animals. Impulsivity: The Behavioral and Neurological Science of Discounting

Impulsivity: The Behavioural and Neurological Science of ...

Impulsivity has been consistently linked to several types of addiction, attention deficit/hyperactivity disorder, mania and other psychiatric conditions. Our discussion of the behavioral assessment of impulsivity will focus on objective laboratory tasks of response inhibition that have been implemented in parallel for humans and other species with relatively few qualitative differences.
