Concepts of modeling are covered, including describing a system, translating appropriate aspects into equations, and interpreting results in terms of the original problem. By understanding the concepts, students learn that the science is central and "solving" the equations is in some ways the least important step.

The dynamics of an epidemic, for example the flu, are often much faster than the dynamics of birth and death, therefore, birth and death are often omitted in simple compartmental models. The SIR system without so-called vital dynamics (birth and death, sometimes called demography) described above can be expressed by the following set of ...
