The answer is no. For population growth to be exponential, the growth rate would have to be the same over time (e.g. 2% growth every year). In absolute terms, this would result in an exponential increase in the number of people. That's because we'd be multiplying an ever-larger number of people by the same 2%.

Development of the human body is the process of growth to maturity. The process begins with fertilization, where an egg released from the ovary of a female is penetrated by a sperm cell from a male. The resulting zygote develops through mitosis and cell differentiation, and the resulting embryo then implants in the uterus, where the embryo continues development through a fetal stage until birth. Further growth and development continues after birth, and includes both physical and psychological de
