Powered By The Sun An

The Sun is the star at the center of the Solar System. It is a nearly perfect sphere of hot plasma, with internal convective motion that generates a magnetic field via a dynamo process. It is by far the most important source of energy for life on Earth. Its diameter is about 1.39 million kilometers (864,000 miles), or 109 times that of Earth, and its mass is about 330,000

using a battery, or use solar panels to recharge batteries or run auxiliary systems for a car that mainly uses battery power.

Solar car - Wikipedia

The sun is the closest star to Earth. Even at a distance of 150 million kilometers (93 million miles), its gravitational pull holds the planet in orbit. It radiates light and heat, or solar energy, which makes it possible for life to exist on Earth. Plants need sunlight to grow. Animals, including humans, need plants for food and the oxygen they produce.

The power of the sun is a lot like a fun little cocktail of Playing with Fire and Light 'em Up, with an occasional side of nuclear weapons. Often associated with heroes, but not always; villains that use solar power, directly or indirectly through technology, are fairly common in science-fiction. If elements oppose each other, the power of the sun will generally be opposite Lunacy.
