Biological Anthropology | Department of Anthropology

Biological anthropology is a popular area of study within anthropology. It is the combination of both the biological and social sciences to answer questions about human adaptability and evolution. As far as research methods go, biological anthropologists tend to include more traditionally scientific research, including lab work, data analysis ...

Biological Anthropology - Explorable

Physical/ biological anthropology is the study of the past and present evolution of the human species and is especially concerned with understanding the causes of present human diversity. Within this broad definition it encompasses fields as disparate as human palaeontology, evolutionary biology, human genetics, comparative anatomy and physiology, primate behaviour, human behavioural ecology ...

Biological Anthropology

Biology. In biology, field research typically involves studying of free-living wild animals in which the subjects are observed in their natural habitat, without changing, harming, or materially altering the setting or behavior of the animals under study. Field research is an indispensable part of biological science.

Field research - Wikipedia

Human biology is an interdisciplinary field of biology, biological anthropology, nutrition and medicine, which concerns international, population-level perspectives on health, evolution, anatomy, physiology, molecular biology, neuroscience, and genetics. Primatology is the study of non-human primate behavior, morphology, and genetics.

Biological anthropology - Wikipedia

The division of anthropology called biological anthropology is very different from the others, it deals with both the social behavior and the biology of people—it is a biosocial science. These studies can be carried out on the skeletal remains of people from the past or on the biological characteristics of living people.
