engineering to the design and construction of foundations for buildings and other structures. The most basic aspect of foundation engineering deals with the selection of the type of foundation, such as using a shallow or deep foundation system. Another important aspect of foundation engineering involves the development of design parameters, such as the bearing capacity of the foundation.

In particular it is concerned with the interaction of structures with their foundation material. This includes both conventional structures and also structures such as earth dams, embankments and roads which are their-selves made of soil.

Soils and Foundations is one of the
leading journals in the field of soil
mechanics and geotechnical
engineering. It is the official journal of
the Japanese Geotechnical Society
(JGS)., The journal publishes a variety
of original research paper, technical
reports, technical notes, as well as the
state-of-the-art reports upon invitation
by the Editor, in the fields of soil and
rock mechanics, geotechnical
engineering, and environmental
geotechnics.
