Sync is order that arises without centralized intelligence. Yet in a universe driven by entropy how can order arise from chaos? The answer is that in non-linear systems, systems where the change in the output is not proportional to the change in the input, self organizing behavior can emerge.

Sync: The Emerging Science of Spontaneous Order by Steven ...

"Sync: The Emerging Science of Spontaneous Order" is a dissertation on synchronization and its place in the universe. Standard entropy theory has always indicated that a system that is orderly will, over time, move to a position of less and less organization. However, that is not always consistent with observations in real life.

Sync explores the synchronization phenomena inherent in many complex systems, the way they coordinate their actions with respect to time, building order out of seeming noise. From fireflies to circadian rhythms to swinging pendulums to brain neurons to orbiting bodies to Higgs boson fields, there's an eerie tendency in nature for things to fall in step.
