Systematics and systematics. The inland dotterel was first documented in 1840 after Captain Charles Sturt collected an immature bird on one of his expeditions to the Australian interior and sent it to John Gould. Gould initially named it Eudromias australis (from the Greek eu, good, and dromos, runner, and australis, of the southern continent).

Inland dotterel - Wikipedia

Grallina is a genus of passerine bird native to Australia and New Guinea. It is a member of a group of birds termed monarch flycatchers. This group is considered either as a subfamily Monarchinae, together with the fantails as part of the drongo family Dicruridae, or as a family Monarchidae in its own right.
