Wilhelm Conrad Röntgen in 1895. Of the many “gifts” that physics has made to medicine, the discovery of X-rays is probably the greatest.

The physical basis and future of radiation therapy

Radiation therapy kills cancer cells that are dividing, but it also affects dividing cells of normal tissues. The damage to normal cells causes unwanted side effects.

Radiation therapy is always a balance between destroying the cancer cells and minimizing damage to the normal cells. Radiation doesn't always kill cancer cells or normal cells right away.
