WEKA 3.6.9 (Waikato Environment for Knowledge Analysis): Tools untuk Memahami Machine Learning Dewi Retno Sari Saputro & Sutanto, 2023-10-03 Banyaknya aliran data saat ini perlu dimanfaatkan secara optimal bahkan apabila data tersebut memuat informasi berharga. Pemaknaan informasi yang tersembunyi dalam data dapat dilakukan melalui data mining. Data science, machine learning, dan data mining adalah tiga konsep yang saling terkait dalam pengolahan data. Software yang mendukung konsep tersebut yakni Waikato Environment for Knowledge Analysis (Weka). Ada dua versi Weka yakni Weka 3.8 versi stabil dan Weka 3.9 versi pengembangan. Weka ditulis dengan bahasa pemrograman Java yang terdiri atas koleksi algoritme machine learning. Koleksi algoritme tersebut untuk melakukan generalisasi data sampling. Generalisasi data meliputi pra processing, classification, regression, clustering, association rules, dan visualization. Keunggulan Weka dalam hal penggunaan yakni kemudahan dan kepraktisannya karena telah menggunakan antarmuka grafis dan merupakan sistem komponen visual interaktif untuk memberi instruksi.

Proceedings of the 9th International Conference on Computer Recognition Systems CORES 2015 Robert Burduk, Konrad Jackowski, Marek Kurzynski, Michal Wozniak, Andrzej Zolnierek, 2016-03-05 The computer recognition systems are nowadays one of the most promising directions in artificial intelligence. This book is the most comprehensive study of this field. It contains a collection of 79 carefully selected articles contributed by experts of pattern recognition. It reports on current research with respect to both methodology and applications. In particular, it includes the following sections: Features learning and classifiers, Biometrics, Data Stream Classification, and Big Data Analytics, Image processing and computer vision, Medical applications, Applications, RGB D perception, recent developments, and applications. This book is a great reference tool for scientists who deal with the problems of designing computer pattern recognition systems. Its target readers can be the as well researchers as students of computer science, artificial intelligence, or robotics.

A First Course in Artificial Intelligence Osondu Oguike, 2021-07-14 The importance of Artificial Intelligence cannot be over emphasised in current times where automation is already an integral part of industrial and business processes. A First Course in Artificial Intelligence is a comprehensive textbook for beginners which covers all the fundamentals of Artificial Intelligence. Seven chapters divided into thirty three units introduce the student to key concepts of the discipline in simple language including expert system, natural language processing, machine learning, machine learning applications, sensory perceptions, computer vision, tactile perception, and robotics. Each chapter provides information in separate units about relevant history, applications, algorithm, and programming with relevant case studies and examples. The simplified approach to the subject enables beginners in computer science who have a basic knowledge of Java programming to easily understand the contents. The text also introduces Python programming language basics with demonstrations of natural language processing. It also introduces readers to the Waikato Environment for Knowledge

Analysis WEKA as a tool for machine learning The book is suitable for students and teachers involved in introductory courses in undergraduate and diploma level courses which have appropriate modules on artificial intelligence Weka Diary Travel,2019-11-30 This 100 Dot Graph pages notebook can be used as a sketch book for drawing and painting as well as a writing and composition notebook or as a school and students exercise book Great gift idea for a birthday christmas valentine s day and anniversary

Advances in Artificial Intelligence Marina Sokolova,Peter van Beek,2014-04-30 This book constitutes the refereed proceedings of the 27th Canadian Conference on Artificial Intelligence Canadian AI 2014 held in Montr al QC Canada in May 2014 The 22 regular papers and 18 short papers presented together with 3 invited talks were carefully reviewed and selected from 94 submissions The papers cover a variety of topics within AI such as agent systems AI applications automated reasoning bioinformatics and BioNLP case based reasoning cognitive models constraint satisfaction data mining E commerce evolutionary computation games information retrieval knowledge representation machine learning multi media processing natural language processing neural nets planning privacy preserving data mining robotics search smart graphics uncertainty user modeling web applications Advances in Artificial Intelligence Luc Lamontagne,Mario Marchand,2006-05-31 This book constitutes the refereed proceedings of the 19th Conference of the Canadian Society for Computational Studies of Intelligence Canadian AI 2006 held in Qu bec City Canada in June 2006 The book presents 47 carefully reviewed revised full papers These are organized in topical sections on agents bioinformatics constraint satisfaction and distributed search knowledge representation and reasoning natural language reinforcement learning and supervised and unsupervised learning Machine Learning Paradigms George A. Tsihrintzis,Maria Virvou,Evangelos Sakkopoulos,Lakhmi C. Jain,2019-07-06 This book is the inaugural volume in the new Springer series on Learning and Analytics in Intelligent Systems The series aims at providing in hard copy and soft copy form books on all aspects of learning analytics advanced intelligent systems and related technologies These disciplines are strongly related and mutually complementary accordingly the new series encourages an integrated approach to themes and topics in these disciplines which will result in significant cross fertilization research advances and new knowledge creation To maximize the dissemination of research findings the series will publish edited books monographs handbooks textbooks and conference proceedings This book is intended for professors researchers scientists engineers and students An extensive list of references at the end of each chapter allows readers to probe further into those application areas that interest them most

Content-Based Image Classification Rik Das,2020-12-17 Content Based Image Classification Efficient Machine Learning Using Robust Feature Extraction Techniques is a comprehensive guide to research with invaluable image data Social Science Research Network has revealed that 65% of people are visual learners Research data provided by Hyerle 2000 has clearly shown 90% of information in the human brain is visual Thus it is no wonder that visual information processing in the brain is 60 000 times faster than text based information 3M Corporation 2001 Recently we have witnessed a significant surge in conversing with images due to the

popularity of social networking platforms The other reason for embracing usage of image data is the mass availability of high resolution cellphone cameras Wide usage of image data in diversified application areas including medical science media sports remote sensing and so on has spurred the need for further research in optimizing archival maintenance and retrieval of appropriate image content to leverage data driven decision making This book demonstrates several techniques of image processing to represent image data in a desired format for information identification It discusses the application of machine learning and deep learning for identifying and categorizing appropriate image data helpful in designing automated decision support systems The book offers comprehensive coverage of the most essential topics including Image feature extraction with novel handcrafted techniques traditional feature extraction Image feature extraction with automated techniques representation learning with CNNs Significance of fusion based approaches in enhancing classification accuracy MATLAB codes for implementing the techniques Use of the Open Access data mining tool WEKA for multiple tasks The book is intended for budding researchers technocrats engineering students and machine learning deep learning enthusiasts who are willing to start their computer vision journey with content based image recognition The readers will get a clear picture of the essentials for transforming the image data into valuable means for insight generation Readers will learn coding techniques necessary to propose novel mechanisms and disruptive approaches The WEKA guide provided is beneficial for those uncomfortable coding for machine learning algorithms The WEKA tool assists the learner in implementing machine learning algorithms with the click of a button Thus this book will be a stepping stone for your machine learning journey Please visit the author s website for any further guidance at <https://www.rikdas.com>

XIII Mediterranean Conference on Medical and Biological Engineering and Computing 2013 Laura M. Roa Romero,2013-10-01 The general theme of MEDICON 2013 is Research and Development of Technology for Sustainable Healthcare This decade is being characterized by the appearance and use of emergent technologies under development This situation has produced a tremendous impact on Medicine and Biology from which it is expected an unparalleled evolution in these disciplines towards novel concept and practices The consequence will be a significant improvement in health care and well fare i e the shift from a reactive medicine to a preventive medicine This shift implies that the citizen will play an important role in the healthcare delivery process what requires a comprehensive and personalized assistance In this context society will meet emerging media incorporated to all objects capable of providing a seamless adaptive anticipatory unobtrusive and pervasive assistance The challenge will be to remove current barriers related to the lack of knowledge required to produce new opportunities for all the society while new paradigms are created for this inclusive society to be socially and economically sustainable and respectful with the environment In this way these proceedings focus on the convergence of biomedical engineering topics ranging from formalized theory through experimental science and technological development to practical clinical applications

Organic Xenobiotics and Plants Peter Schröder,Christopher D. Collins,2010-11-08 Natural and agro

ecosystems are frequently exposed to natural or synthetic substances which while they have no direct nutritional value or significance in metabolism may negatively affect plant functioning These xenobiotics may originate from both natural fires volcano eruptions soil or rock erosion biodegradation and anthropogenic air and soil pollution herbicides sources And while affected plants have only a limited number of possibilities for avoiding accumulation of these compounds they do exhibit several enzymatic reactions for detoxification including oxidation reduction hydrolysis and conjugation reactions In agro ecosystems in particular these mechanisms have great significance in relation to herbicide detoxification and tolerance In this volume an international group of experts present an overview of the nature and distribution of organic xenobiotics including their uptake effects on plant functioning and detoxification mechanisms The particular significance of glutathione S transferases in bio indication and bio monitoring and in the detoxification of volatile organic air pollutants and herbicides is evaluated and their potential significance in phytoremediation and bioaccumulation will be discussed This volume will be of interest to a wide audience from graduate students to senior researchers in a wide range of disciplines including plant ecology plant biochemistry agriculture and environmental management It will also be of practical interest to environmentalists policy makers and resource managers

Membrane Computing Rudolf Freund, Tseren-Onolt

Ishdorj, Grzegorz Rozenberg, Arto Salomaa, Claudio Zandron, 2021-06-03 This book constitutes the refereed post conference proceedings of the 21st International Conference on Membrane Computing CMC 2020 held as a virtual event in September 2020 The 10 full papers presented were selected from 31 submissions The papers deal with all aspects on membrane computing and related areas

Java Data Analysis John R. Hubbard, 2017-09-19

Get the most out of the popular Java libraries and tools to perform efficient data analysis About This Book Get your basics right for data analysis with Java and make sense of your data through effective visualizations Use various Java APIs and tools such as Rapidminer and WEKA for effective data analysis and machine learning This is your companion to understanding and implementing a solid data analysis solution using Java Who This Book Is For If you are a student or Java developer or a budding data scientist who wishes to learn the fundamentals of data analysis and learn to perform data analysis with Java this book is for you Some familiarity with elementary statistics and relational databases will be helpful but is not mandatory to get the most out of this book A firm understanding of Java is required What You Will Learn Develop Java programs that analyze data sets of nearly any size including text Implement important machine learning algorithms such as regression classification and clustering Interface with and apply standard open source Java libraries and APIs to analyze and visualize data Process data from both relational and non relational databases and from time series data Employ Java tools to visualize data in various forms Understand multimedia data analysis algorithms and implement them in Java In Detail Data analysis is a process of inspecting cleansing transforming and modeling data with the aim of discovering useful information Java is one of the most popular languages to perform your data analysis tasks This book will help you learn the tools and techniques in Java to conduct data analysis

without any hassle After getting a quick overview of what data science is and the steps involved in the process you ll learn the statistical data analysis techniques and implement them using the popular Java APIs and libraries Through practical examples you will also learn the machine learning concepts such as classification and regression In the process you ll familiarize yourself with tools such as Rapidminer and WEKA and see how these Java based tools can be used effectively for analysis You will also learn how to analyze text and other types of multimedia Learn to work with relational NoSQL and time series data This book will also show you how you can utilize different Java based libraries to create insightful and easy to understand plots and graphs By the end of this book you will have a solid understanding of the various data analysis techniques and how to implement them using Java Style and approach The book takes a very comprehensive approach to enhance your understanding of data analysis Sufficient real world examples and use cases are included to help you grasp the concepts quickly and apply them easily in your day to day work Packed with clear easy to follow examples this book will turn you into an ace data analyst in no time

Multiple Classifier Systems Carlo Sansone,Josef Kittler,Fabio Roli,2011-09-15 This book constitutes the refereed proceedings of the 10th International Workshop on Multiple Classifier Systems MCS 2011 held in Naples Italy in June 2011 The 36 revised papers presented together with two invited papers were carefully reviewed and selected from more than 50 submissions The contributions are organized into sessions dealing with classifier ensembles trees and forests one class classifiers multiple kernels classifier selection sequential combination ECOC diversity clustering biometrics and computer security

Wearable and Wireless Systems for Healthcare I Robert Charles LeMoyné,Timothy Mastroianni,2024 This book is the second edition of the one originally published in 2017 The original publication features the discovery of numerous novel applications for the use of smartphones and portable media devices for the quantification of gait reflex response and an assortment of other concepts that constitute first in the world applications for these devices Since the first edition numerous evolutions involving the domain of wearable and wireless systems for healthcare have transpired warranting the publication of the second edition This volume covers wearable and wireless systems for healthcare that are far more oriented to the unique requirements of the biomedical domain The paradigm shifting new wearables have been successfully applied to gait analysis homebound therapy and quantifiable exercise Additionally the confluence of wearable and wireless systems for healthcare with deep learning and neuromorphic applications for classification is addressed The authors expect that these significant developments make this book valuable for all readers

Artificial Intelligence for Human Computer Interaction: A Modern Approach Yang Li,Otmar Hilliges,2021-11-04 This edited book explores the many interesting questions that lie at the intersection between AI and HCI It covers a comprehensive set of perspectives methods and projects that present the challenges and opportunities that modern AI methods bring to HCI researchers and practitioners The chapters take a clear departure from traditional HCI methods and leverage data driven and deep learning methods to tackle HCI problems that were previously challenging or impossible to address It starts with addressing classic

HCI topics including human behaviour modeling and input and then dedicates a section to data and tools two technical pillars of modern AI methods These chapters exemplify how state of the art deep learning methods infuse new directions and allow researchers to tackle long standing and newly emerging HCI problems alike Artificial Intelligence for Human Computer Interaction A Modern Approach concludes with a section on Specific Domains which covers a set of emerging HCI areas where modern AI methods start to show real impact such as personalized medical design and UI automation Discovery Science Larisa Soldatova, Joaquin Vanschoren, George Papadopoulos, Michelangelo Ceci, 2018-10-22 This book constitutes the proceedings of the 21st International Conference on Discovery Science DS 2018 held in Limassol Cyprus in October 2018 co located with the International Symposium on Methodologies for Intelligent Systems ISMIS 2018 The 30 full papers presented together with 5 abstracts of invited talks in this volume were carefully reviewed and selected from 71 submissions The scope of the conference includes the development and analysis of methods for discovering scientific knowledge coming from machine learning data mining intelligent data analysis big data analysis as well as their application in various scientific domains The papers are organized in the following topical sections Classification meta learning reinforcement learning streams and time series subgroup and subgraph discovery text mining and applications **Data Mining** Ian H. Witten, Eibe Frank, Mark A. Hall, 2011-02-03 Data Mining Practical Machine Learning Tools and Techniques Third Edition offers a thorough grounding in machine learning concepts as well as practical advice on applying machine learning tools and techniques in real world data mining situations This highly anticipated third edition of the most acclaimed work on data mining and machine learning will teach you everything you need to know about preparing inputs interpreting outputs evaluating results and the algorithmic methods at the heart of successful data mining Thorough updates reflect the technical changes and modernizations that have taken place in the field since the last edition including new material on Data Transformations Ensemble Learning Massive Data Sets Multi instance Learning plus a new version of the popular Weka machine learning software developed by the authors Witten Frank and Hall include both tried and true techniques of today as well as methods at the leading edge of contemporary research The book is targeted at information systems practitioners programmers consultants developers information technology managers specification writers data analysts data modelers database R D professionals data warehouse engineers data mining professionals The book will also be useful for professors and students of upper level undergraduate and graduate level data mining and machine learning courses who want to incorporate data mining as part of their data management knowledge base and expertise Provides a thorough grounding in machine learning concepts as well as practical advice on applying the tools and techniques to your data mining projects Offers concrete tips and techniques for performance improvement that work by transforming the input or output in machine learning methods Includes downloadable Weka software toolkit a collection of machine learning algorithms for data mining tasks in an updated interactive interface Algorithms in toolkit cover data pre processing classification regression clustering
